

## HOW TO CLEAN SHEEPSKIN?

To keep your sheepskin seat covers clean and looking great, simply follow these instructions.

Regular brushing (a pet brush works great) and vacuuming will help keep your sheepskin seat covers in first-class condition. Also, tumbling them in a clothes dryer without heat helps to remove dirt and grit and to fluff the fleece. They may be spot cleaned while installed using any product recommended for wool care.

Have them professionally dry cleaned as needed.

Sheepskin is a natural product that breathes. Ventilate your vehicle when practical to dissipate moisture and odors. Avoid getting the sheepskin wet. If they become wet remove them immediately and allow them to dry slowly in a shaded area.
